

ABDULOAWI MOHAMMED AHMED AL-SALMI

CONTACT

- +967773950478
- abdualgaweealsalmi87@gmail.com
- Address: Dhamar, Yemen
- Date of Birth: 1 January 2000
- Nationality: Yemeni
- Marital status: Single

TECHNICAL SKILLS

- Programming Languages: C++, C#, Python, Flutter
- Database Systems: SQL, Supabase, Firebase
- Networking Tools: Cisco Packet Tracer
- Other Skills: System Analysis, Debugging, Troubleshooting, Team Collaboration

LANGUAGES

- Arabic: Native
- English: Good

INTERESTS

- Mobile Application Development
- Artificial Intelligence
- Networking and Cybersecurity
- Reading about New Technologies

PROFILE

A dynamic and ambitious researcher with exceptional organizational skills and creative thinking, holding a Bachelor's degree in Computer Science from the College of Computing and Informatics at Dhamar University. I possess practical experience in software development, database management, and network configuration, with a deep passion for creating advanced digital solutions.

I excel in

- Developing applications using modern technologies like Flutter and Firebase -
- Designing and building integrated systems that meet user needs -
- Analyzing technical challenges and delivering innovative solutions -

I seek to actively contribute to creative work environments that enable me to enhance my technical capabilities, and I aspire to specialize in cybersecurity to contribute to building secure and effective digital systems that meet the demands of the digital age.

PROJECTS

- Cryptography Systems Developer | "Algorithm Integration" Project | 2023
Developed a comprehensive platform integrating classical encryption algorithms using C# WinForms. Implemented five systems including Caesar, Vigenère, and Playfair ciphers, designed a custom UI, and optimized security performance.
- Box Matching Application | Financial Reconciliation System | 2024
Built a digital reconciliation app using Flutter and Firebase to replace paper-based systems in exchange companies. Automated report submission and validation, improving accuracy and review efficiency.
- Task Distribution Optimization | AI-Based Allocation System | 2025
Developed a smart task allocation system using Python and algorithms like PSO, ACO, and Genetic Algorithm, achieving improved balance and execution efficiency across team tasks.

EDUCATION

Bachelor of Computer Science
University of Dhamar - Faculty of Computer Science
GPA: 74%
Graduation Year: 2025

WORK EXPERIENCE

- Freelance Software Developer | 2023 – Present
- Designed and developed software systems for academic and practical applications using C#, Python, and Flutter.
- Collaborated with peers on various university projects, focusing on system design, testing, and deployment.
- Implemented secure and efficient coding practices to ensure reliability and maintainability of developed systems.
- Developed network simulation projects using Cisco Packet Tracer, including configuration of VLANs, routers, switches, and device communication.
- Built Python applications for data management, socket programming, and client-server communication using JSON and dictionaries.
- Assisted in designing task distribution algorithms using PSO, ACO, Genetic Algorithm, and Backpropagation for team project optimization.
- Created cryptography systems in C#, implementing multiple classical encryption algorithms for secure data handling.
